

## W7. Functions

1. What is a function?

2. Make a function "name" that will print out your class ID, class no, and your nickname.

```

_____( )
_____ ("_____, _____, _____")
  
```

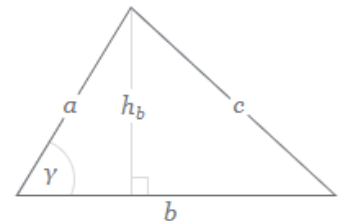

3. Write a program that will calculate the area of a triangle. Define a function called "triArea" where you will calculate the triangle area and print the result. The function has two arguments (b, h). After the function ask the user for input from the user. Call the function.

```

_____(_____, _____)
_____ = 0.5 * _____ * _____
_____ ("Area of the triangle is: ", _____)
  
```

```

_____ = _____ ("Enter the _____ of the triangle: ")
_____ = _____ ("Enter the _____ of the triangle: ")
_____ (_____, _____)
  
```

$$\text{Area} = \frac{h_b b}{2}$$
